

SCHOOL SAFETY PROGRAMME

FAS International Pakistan can help schools to have an “emergency preparedness plan” or if our client demands we help them to establish and run School Safety Management System, a documented Management System to manage safety issues and they way unexpected emergencies can be handled.

FAS International Pakistan is working on their new service which is “**School Safety Program**”. Pakistan lack mindset in safety and if it is true then schools are the best place to go and correct what went wrong and encourage our coming generation to plan ahead and **prepare to prevent** and if not possible to avoid it then put in place some **plans to mitigate**. FAS International Pakistan will help schools to have an emergency preparedness plan in place to deal with emergencies. In an emergency event, **schools must function temporarily as a parent, a nurse, and a physician**. If any injury, illness or fatality occurs at school premises, playing

grounds, explosion of cylinders, fire, fall from height, injury during extension/construction phase, school managed transport or other obligations under School control, the pain suffering of the parents turn into anger and frustration. The injury and loss of life of a child is unbearable pain that parents had to go through. **FAS International Pakistan** will make sure that our program will never let schools feel unprepared to deal with emergencies.

We do have planned drills in our offices and at work areas but how often we do them at home? It is high time and when children learn in their childhood or early adolescent age it is very rare they forget it in their remaining life. **FAS International Pakistan** will make sure that our program will never let them feel unprepared to deal with emergencies.

If you plan for a year, plant a seed. If you plan for ten years, plant a tree. If for hundred years, teach the people.
